

# GOLDEN STAR

## Air and Greenhouse Monitoring

*Meeting the needs of the present without compromising the ability of future generations to meet their own needs.*

Golden Star continued to promote a pre-cautionary approach to environmental challenges and undertake initiatives to promote greater environmental responsibility.

We received no enforcement actions or fines and since 2011 have had no reportable environmental incidents.

### **Air and Greenhouse**

We measured air quality at 30 locations near our activities and took over 400 samples.

The dust in the air was acceptable when compared to EPA guidelines. Whilst this was the case, we remain sensitive to the needs of our local communities and take additional action as required.

We used 116,313 MWh of electricity in 2018. This was slightly lower than the previous year.

We used 9.8 ML of diesel in 2018, a decrease on 2017.

Over the last decade the CO<sub>2</sub> produced was offset by some 1,000 hectares of revegetation, 178,000 seedlings grown and planted, and 18,000 kg of seeds planted as part of the revegetation work.
